

Uthoff Hybrids is a multi-generational owned and operated family farming business located south of Cedar Rapids, Iowa. Founded in 1978 by Vince and his parents, Orville & Marie. Since 1996, Vince & Ann Uthoff have operated the business. In 2018 Jordan & his wife, Kaci, joined the family business. We pride ourselves on being a regional seed corn company. We also farm, raise cattle, so we know what issues farmers can face during the year. We produce, condition, and sell top yielding hybrids. Our goal has always been to provide quality seed at a reasonable price. Our customers have always said 'We have had good luck with Uthoff Hybrids' 'The Good Luck Corn'.

UTHOFF HYBRIDS

'THE GOOD LUCK CORN'

**UTHOFF
HYBRIDS**

'THE GOOD LUCK CORN'

**Conventional
Corn Hybrids
2027**

U099 99 Day

Excellent agronomics on a hybrid that can go north very well. Can be planted early season south of Highway 30 for early harvest without sacrificing yield.

U403 103 Day

Consistent performing hybrid that works on variable soils with superior stress package. This hybrid brings natural disease tolerance to Tar Spot, Northern Corn leaf blight, and Goss's wilt.

U404 104 Day

Medium plant height, with high test weight. Excellent Goss's wilt and tar spot ratings. Good Late season health and agronomics. This hybrid does not need high plant populations for best results.

U505 105 Day

Attractive hybrid with excellent tolerance to tar spot and southern rust. This hybrid performs well across variable soils and planting conditions, with good seedling vigor.

U206 106 Day

Medium ear placement & good stalk strength. Very high root rating, large girthy ears with deep kernels. Very good ear flex. Likes productive soil and moderately productive soils alike.

U607 107 Day

Semi Flex ear with above average test weight. This is a very attractive hybrid that has been a top yielder in our test plots that past two years.

U508 108 Day

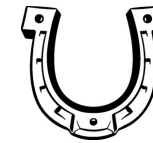

Consistently healthy hybrid that stands well late season. This is a well-balanced hybrid that brings strong test weight and grain quality. This is the top choice for tar spot in our lineup.

U209 109 Day

Tall hybrid works well across variable soil types and environments. Good choice in our lineup for silage corn for tonnage.

U309 109 Day

Semi-flex tapered ear with excellent test weight. This hybrid has a superior disease package and stands very well late season.

U110 110 day

New for 2027!

This hybrid brings excellent stalk and root ratings and is best suited for the more productive fields. Good choice for corn on corn and silage.

U211 111 Day

Well adapted hybrid that excels on the more challenging farms. This hybrid shows great tolerance to heat and drought stresses, while still delivering high test weight and grain quality. Quantities will be limited on this hybrid.

U114 114 day

Tall hybrid that delivers in variable fields. Excellent disease package that stands out in every field. Hybrid has a semi flex ear with excellent test weight.

U115 115 Day

New for 2027!

Flex ear hybrid that fills well and provides kernel depth. Late season stay green is complimented with strong disease package. This hybrid works best on average plant populations.
